Submitted (MAY-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin and type V collagen.
-!- SUBUNIT: Homotrimer; disulfide-linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TISSUE=Aortic endothelium;

"Biophysical characterization, including disulfide bond assignments, of the anti-analogenic type I domains of human thrombospondin-1.";

Biochemistry 41:14329-14339 (2002).

"I FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type V collagen and integrins alpha-V/beta-1, alpha-V/beta-3 and alpha-IIb/beta-3.

"SIMILARITY: Belongs to the thrombospondin family.

"SIMILARITY: Contains 1 WFC domains.

"SIMILARITY: Contains 3 ESF-like domains.

"SIMILARITY: Contains 3 TSP type-1 domains.

"SIMILARITY: Contains 7 TSP type-3 domains.

"SIMILARITY: Contains 7 TSP type-3 domains.

"SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.
sites in the 3' untranslated region.";
J. Cell Biol. 108:729-736 (1989).

-!- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type v collagen and integrins alpha-V/beta-1, alpha-V/beta-3 and alpha-IID/beta-3. May play a role in dentinogenesis and/or maintenance of dentin and dental pulp.
-!- SUBUNIT: Homotrimer; disulfide-linked.
